Demonstration Soil Testing Laboratory

SOIL HEALTH & FERTILITY TEST REPORT

SAMPLE DATA — FOR PROJECT DEMONSTRATION ONLY

Fictional test report generated exclusively for testing the MannuMitra AI-Based Predictive Farming System.

Soil Sample ID:	DEMO-SOIL-001	**Report Date:**	15-Oct-2026
Location / District:	Mandya district, Karnataka	**Laboratory:**	Demonstration Soil Testing Laboratory
Soil Classification:	Red loamy soil	**Analytical Method:**	Standard Soil Fertility Assay (ICAR)

SOIL CHEMICAL AND PHYSICAL PARAMETERS

Parameter Name	Symbol	Observed Value	Unit	Reference Range	Evaluation Status
Available Nitrogen	**N**	**245.5**	kg/ha	280.0 – 560.0	**Medium (Slightly Deficient)**
Available Phosphorus	**P**	**48.2**	kg/ha	23.0 – 56.0	**Medium (Optimal)**
Available Potassium	**K**	**195.0**	kg/ha	140.0 – 330.0	**Medium (Sufficient)**
Soil Reaction (pH)	**pH**	**6.8**	pH scale	6.5 – 7.5	**Neutral (Ideal)**
Electrical Conductivity	**EC**	**0.38**	dS/m	< 1.00	**Normal (Non-Saline)**
Organic Carbon	**OC**	**0.62**	%	0.50 – 0.75	**Medium (Satisfactory)**

Interpretation & General Nutrient Advisory:

• **Nitrogen (245.5 kg/ha):** Available nitrogen is in the low-to-medium category. Basal application of Farm Yard Manure (FYM @ 4 tonnes/acre) combined with split urea or neem-coated nitrogen application is advised.

• **Phosphorus (48.2 kg/ha) & Potassium (195.0 kg/ha):** Readily available in balanced concentrations suitable for typical dryland and irrigated crops in Karnataka.

• **Soil pH (6.8) & Salinity (EC 0.38 dS/m):** Indicates near-neutral, highly favorable soil reaction with negligible soluble salt hazard.

NOTICE: This document contains synthetic demonstration data designed specifically for academic verification and user testing of the MannuMitra AI Soil Report OCR extraction service. It does not certify official government accreditation and should not be used for commercial land transactions or actual agricultural field decisions.
